

\$ANSER is an on-chain transparency standard for Solana.

The token exists to test whether transparency has economic value.

THE SCANNER — FREE TOOL — THEANSER.APP/SCORE

Any Solana token. Instant on-chain audit. 9 metrics. No wallet. Nothing stored.

- Mint Authority revoked (25 pts — VERIFIED)
- Holder Distribution top-20 (20 pts — AMM filtered)
- Liquidity / MCAP ratio (15 pts)
- Freeze Authority revoked (10 pts — VERIFIED)
- Contract Age (10 pts)
- Token Mechanics / Token-2022 (10 pts — VERIFIED)
- Honeypot Check — cap at 15 if likely trap
- Update Authority — cap at 85 if mutable
- Creator Risk (10 pts — INDICATIVE)

Also on Telegram: @TheAnser_bot — paste any CA, get instant audit.

THE TOKEN — ON-CHAIN COMMITMENTS — NOT PROMISES

- ✓ Mint authority revoked at deploy — irreversible
- ✓ LP locked ≥1 year via Unicrypt — on-chain
- ✓ Creator Vesting: 6-month cliff + 2yr via Streamflow
- ✓ Ecosystem Vesting: 2-year linear via Streamflow
- ✓ Community Reserve: 530M locked 4 years via Streamflow → DAO treasury
- ✓ Self-audit published before trading begins
- ✓ No private sale. No VC. No presale pricing.
- ✓ No exchange listing without DAO governance vote.

These are contracts. The difference from promises matters.

If the live scanner returns below STRUCTURALLY SOUND (75+) at deploy, the launch is halted and the contradiction is made public.

The scanner exists whether or not anyone holds the token.

The token exists to ask whether transparency has economic gravity. That is the entire question.

The scanner is a gift. The token is a question.

ALLOCATION	%	TOKENS	CONDITIONS
Community Reserve	53%	530M	Streamflow 4yr linear vest (~11M/month) into the DAO-governed treasury · long-term community & liquidity incentives
Ecosystem Vesting	20%	200M	Streamflow 2yr linear vest (~8.3M/month) — DAO-governed: grants, bounties, listings, ops
Liquidity	5%	50M	Seeds the Raydium pool — LP locked ≥1 year via Unicrypt
Staking Rewards	10%	100M	Gradual emission over 4 years — timeline set by DAO
Creator Vesting	10%	100M	Streamflow — 6-month cliff + 2-year linear vest (~4.2M/month after cliff)
Community Airdrop	2%	20M	Proportional to verified early holders · claimed linearly over 6 months · sized below pool depth

HALL OF SHAME — THEANSER.APP/HALL

A public record of tokens the scanner flagged as high risk — before they collapsed. Audit score, Goose Voice, timestamp. Then the outcome.

Structural failures observed on-chain. Not allegations.

VERIFICATION SEQUENCE — THEANSER.APP/MILESTONES

Every action from scanner launch to token deploy, documented and verifiable on-chain. Not a roadmap. A record to be judged by.

If we don't do them, don't buy \$ANSER.

*"The goose doesn't promise anything.
That's why you can trust it."*
